Composite Skills

87% Entrepreneuship + 95% Front End + 88% Back End = 90% High Score

Experience

2015

Senior Front End Developer

Beyondsoft Information Technology (Shenzhen) Co., Ltd.

I joined in Personnel Management System in SF-Express, small investemnt system in a small company, Supervision System in Tencent Webank. All of this projects use **Highcharts** and **HTML5** technology.

2011

Full Stack Engineer

Individual entrepreneurs

Develope corporate website, based on **Python + Django + Mysql** or **Nodejs + Express + Mongodb**. Maintenance Linux hosts, build and install Web server, monitor system security with Shell script and html5, mail system solution. I alse write Windows desktop application and iOs Application too. This is very hard that I often have no time to sleep at night for solve the problem.

2009

Senior Network Engineer

Shenzhen Uitega furniture decoration Ltd.

Building company's online shopping platform with my friend. I was responsible for planning, communication and front-end design. We met lots of problem, include network security, spam filtering, transaction interface, docking, database security and other issues. Thanks of these problem let me learn to break through myself and led me into the world of Open-source, which brought me lots of experience when I read it.

2007

Yahoo TW OSP Front-End Software Engineer

Achievo Information Technology (Shenzhen) Co., Ltd.

Writeing HTML, CSS and JavaScript code depend on UI design. We often share technology and experience in Yahoo team. I got the price at Yahoo 2008 Hack Day competition.

2006

Software Development Engineer

Shengrui Electronic Technology Co.,

Develop OABOX website, use PHP, AJAX, CSS and JavaScript.

Education

2002

Science and technology of computer

Hanshan Normal University

4 years to learn computer technology. I won third price in 2003 province Challenge Cup. I got many award in Electronic Maker.

Portfolio

Dynamic Layout Box

CoffeeScript JavaScript HTML5 CSS3

2016/01 - Now

The project was writen by **CoffeeScript**. You can write plugin yourself, most function interface are based on asynchrnous method. We use **async.js** help write asynchronous code and logic. Our plug-in can be a layout, a form or a page fragment. You just need to drag from toolbar and drop it to editing area, then you can save it directly. You can run it in dynamical page or a new separate page.

The main complex projects that asynchronous flow control, dynamic build contains HTML, CSS and JavaScript and also do not conflict with each other.

ISM of Pad

JavaScript HTML5 CSS3 Object-C

2015/07 - Now

Established by **PhoneGap** which run in iPad. We forked it form IMS-web project with use **Highcharts** show dynamic data. From the graph you can see this project include **WeChat**, **QQ**, and batching monitor. We use **Git** and **Jenkins** to manage the project for develop quickly.

The goal of monitor not only intuitive and beautiful, but alse requires reminded warn or error event quickly and can not missed serious error notification.

Mike Chen's Blog

Node.js CoffeeScript Makefile Jade Markdown

2016/01 - 2016/04

The personal blog based on static file generator system **Wintersmith**, in order to satisfy different functional requirements of blog, I had written automatic image compression and watermarking plugin, label classification plugin etc.

I manage this system with **Makefile**, which can output different format files as required.

QR Technology website

PHP Javascript CSS3

2014/05

The home website of QR technology company, write with PHP. It can running on a common virtual host.

Domorn Web Site

Python JavaScript CSS3

2013/03

The home website of Domorn technology company. It running on **Linux** VPS, which alse run **Postfix** mail system and **Awstats** log file analyzer for advanced statistics. We use open-source that help customer save money.

I4WD house car

PHP JavaScript CSS3

2013/02

I4WD home website, a very common website page, write with **PHP**, so it can easily run on a virtual host.

Base Bible

Python JavaScript HTML5 CSS3

2012/07 - 2013/01

A tool of Bible which can compare different version of Bible. I love read Bible every day, in the beginning just wanted to design a tool that can search the Scriptures. After the first version, I think it was good, then registered the domain and bought VPS to build up this site. Where I learn a lot of Security technology on Linux, including how to optimize system. I wrote Shell script to manager hosts.

Base Bible alse issued a local offline version for Chrome plugin, which adds features such as highlighting and notes. You can find it on Github (https://github.com/basebb/basebible-chrome-plugin).

Website (http://www.basebb.com/)

Uitega Furniture website

Python   Javascript   CSS3

2010/08

This is my first website written with Python, very common and popular site.

Chair live Store

Python   Linux   HTML

2009/10 - 2011/04

Chair live Store is a mall project that used **Python** script language to write. Although there are many open-source framework, but we would write lots of custom plugin, so we develop their own. All modules, database and UI are designed myself.

Although it is not perfect project, and very hard, but we enjoyed it. You can find some front end code on Github (https://github.com/mikecyc/myPlugins).

Yahoo TW Page

PHP   Javascript   CSS

2007/11 - 2009/04

Yahoo TW website base on YUI, design in DIV + CSS module. We wrote this code with **Notepad++** to avoid junk code. It is 10 projects I have joined:

- Yahoo!TW travel: **http://tw.travel.yahoo.com/**
- Yahoo!TW sports: **http://tw.sports.yahoo.com/**
- Yahoo!TW house: **http://tw.house.yahoo.com/**
- Yahoo!TW dictionary: **http://tw.dictionary.yahoo.com/**
- Yahoo!TW tech: **http://tw.tech.yahoo.com/**
- Yahoo!TW charity: **http://tw.charity.yahoo.com/**
- Yahoo!TW access: **http://tw.access.yahoo.com/**
- Yahoo!TW bid: **http://tw.bid.yahoo.com/**
- Yahoo!TW shopping: **http://tw.shopping.yahoo.com/**
- Yahoo!TW buy: **http://buy.yahoo.com.tw/**
